INDEX TO SUBJECTS

A

Acetic acid: Iodo-, carbohydrate metabolism, isolated tissues, effect (BARKER, SHORR, and MALAM) 33

Alkaloid(s): Veratrine (CRAIG and JACOBS) 79

Allothreonine: Threonine, conversion (CARTER, HANDLER, and MELVILLE) 359

Amine(s): -Precipitating reagent, saccharolactone as (KURTZ and WILSON) 693

Amino acid (s): Determination, semimicro- (ING and BERGMANN) 603

N-Methylated, metabolism (GORDON) 309

Reagent, naphthalene-β-sulfonic acid (BERGMANN and STEIN) 609

Amino - N - monomethyltryptophane: *dl*-, growth availability (GORDON) 309

l(+)-, growth availability (GORDON) 309

Androsterone: Dehydroiso-, *m*-dinitrobenzene reaction, behavior (LANGSTROTH and TALBOT) 759

m-Dinitrobenzene reaction, behavior (LANGSTROTH and TALBOT) 759

Anemia: Cholesterol-produced (OKEY and GREAVES) 111

Anticatalase: (TRIA) 377

Apparatus: Photometer, photoelectric (ROSENFELD) 179

Arginase: Liver, food effect (LIGHTBODY and KLEINMAN) 71

Arginine: Determination, Sakaguchi reaction (THOMAS, INGALLS, and LUCK) 263

Ascorbic acid: Endocrines, avitaminosis influence (SURE, THEIS, and HARRELSON) 245

Tissue, avitaminosis influence (SURE, THEIS, and HARRELSON) 245

Atmospheric pressure: Low, blood lipids, effect (MACLACHLAN) 465

Avitaminosis: Endocrine ascorbic acid, influence (SURE, THEIS, and HARRELSON) 245

Tissue ascorbic acid, influence (SURE, THEIS, and HARRELSON) 245

Azlactone(s): (CARTER, HANDLER, and MELVILLE) 359

B

Bacillus: *See also* Tubercle bacillus

Basal metabolism: Iodine effect (GAEBLER and BARTLETT) 559

Basal metabolism—*continued:*
Pituitary, anterior, extract, effect (GAEBLER and BARTLETT) 559
Benzene: *m*-Dinitro-, androsterone, reaction (LANGSTROTH and TALBOT) 759
—, dehydroisoandrosterone, reaction (LANGSTROTH and TALBOT) 759
Benzoyl-α-aminocrotonic acid azlactone: Preparation (CARTER, HANDLER, and MELVILLE) 359
Blood: Acidified, diphosphoglycerate decomposition, glycolysis relation (RAPOPORT and GUEST) 781
Glycolysis, diphosphoglycerate decomposition relation (RAPOPORT and GUEST) 781
Group A specific substance, pneumococcus Type XIV polysaccharide, capsular, relation (GOEBEL, BEESON, and HOAGLAND) 455
Lipids, atmospheric pressure, low, exposure, effect (MACLACHLAN) 465
Nicotinic acid, mammals (PEARSON) 491
Phospholipids, contaminants (CHRISTENSEN) 531
Urea, determination (HOWELL) 641
Blood cell: Red, calcium (STREEF) 661
—, hydrogen ion concentration determination, spectrophotometric (DRABKIN and SINGER) 739
Blood cell—*continued:*
Red, non-hemolyzed, absorption spectra (DRABKIN and SINGER) 739
—, sodium (STREEF) 661
Blood plasma: Lipids, petroleum ether extracts, nitrogenous contaminants (FOLCH and VAN SLYKE) 539
Blood serum: Calcium, determination, micro- (SOBEL and SOBEL) 721
Cephalin (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Lecithin (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Protein, specific gravity relation (SCHOUSBOE) 371
Specific gravity determination, Krogh syringe, protein relation (SCHOUSBOE) 371
Sphingomyelin (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Blood sugar: Glucose-1-phosphate, relation (CORI, CORI, and SCHMIDT) 629
Bone: Phosphatase, sodium β-glycerophosphate hydrolysis, activation energy (BODANSKY) 197
Phosphorus, inorganic, metabolism, radioactive phosphorus as indicator (MANLY and BALE) 125
Bromide: Body fluids (WEIR and HASTINGS) 547
Tissues (WEIR and HASTINGS) 547

Buckwheat: Leaf, nitrogen metabolism (VICKERY, PUCHER, SCHOENHEIMER, and RITTENBERG) 791

Butyric acid: α, β-Deutero-, metabolism, fasting (MOREHOUSE) 769

β, γ-Deutero-, metabolism, fasting (MOREHOUSE) 769

C

Calcium: Blood cell, red (STREEF) 661

— serum, determination, micro- (SOBEL and SOBEL) 721

Carbohydrate: Metabolism, tissues, isolated, iodoacetic acid effect (BARKER, SHORR, and MALAM) 33

Casein: Cystine liberation, tryptic digestion (JONES and GERSDORFF) 207

Catalase: Anti- (TRIA) 377

Immunochemistry (CAMPBELL and FOURT) 385

Cell: Nucleus lipids (STONEBURG) 189

Cephalin: Blood serum (THANNHAUSER, BENOTTI, and REINSTEIN) 709

Body fluids and tissues, determination (THANNHAUSER, BENOTTI, and REINSTEIN) 709

Tissue (THANNHAUSER, BENOTTI, WALCOTT, and REINSTEIN) 717

Cevine: Dehydrogenation, selenium (CRAIG and JACOBS) 79

Chick: Antidermatitis factor, structure (WOOLLEY, WAISMAN, and ELVEHJEM) 673

Chloride(s): Biological fluids, determination, adsorption indicators (SAIFER and HUGHES) 273

— —, —, micro-, dichlorofluorescein use (SAIFER and HUGHES) 273

Body fluids (WEIR and HASTINGS) 547

Tissues (WEIR and HASTINGS) 547

Cholesterol: Anemia from (OKEY and GREAVES) 111

Colorimetry: Photometer, photoelectric, use (ROSENFELD) 179

Copper: Cytochrome oxidase, tissue, effect (SCHULTZE) 729

Corn oil: Fatty acids (LONGENECKER) 13

Cosubstrate(s): Proteolysis (BEHRENS and BERGMANN) 587

Creatinuria: Iodine effect (GAEBLER and BARTLETT) 559

Pituitary, anterior, extract, effect (GAEBLER and BARTLETT) 559

Crotonic acid: Benzoyl-α-amino-, azlactone, preparation (CARTER, HANDLER, and MELVILLE) 359

Crown-gall: *See Phytomonas tumefaciens*

Cysteine: *d*-, benzyl derivatives, optical inversion *in vivo* (DU VIGNEAUD, WOOD, and IRISH) 171

Cysteine—*continued:*
d-Homo-, benzyl derivatives, optical inversion *in vivo* (DU VIGNEAUD, WOOD, and IRISH) 171
Oxidative reactions (TOENNIES and CALLAN) 481
Cysticercus fasciolaris: Chemistry (SALISBURY and ANDERSON) 505
Cystine: Casein digestion, trypsin, liberation (JONES and GERSDORFF) 207
Oxidative reactions (TOENNIES and CALLAN) 481
Peptides, physical chemistry (GREENSTEIN, KLEMPERER, and WYMAN) 681
Stability, alkali effect (JONES and GERSDORFF) 207
Cytochrome: C, determination, spectroscopic (JUNOWICZ-KOCHOLATY and HOGNESS) 569
—, tissue distribution (JUNOWICZ-KOCHOLATY and HOGNESS) 569
Cytochrome oxidase: Tissue, copper and iron deficiencies, effect (SCHULTZE) 729

D

Dehydroisoandrosterone: *m*-Dinitrobenzene reaction, behavior (LANGSTROTH and TALBOT) 759
Dermatitis: Anti-, factor, chick, structure (WOOLLEY, WAISMAN, and ELVEHJEM) 673
Deuterobutyric acid: α, β-, metabolism, fasting (MOREHOUSE) 769
β, γ-, metabolism, fasting (MOREHOUSE) 769
Dichlorofluorescein: Biological fluids, chlorides, determination, micro- (SAIFER and HUGHES) 273
Dinitrobenzene: *m*-, androsterone, reaction (LANGSTROTH and TALBOT) 759
—, dehydroisoandrosterone, reaction (LANGSTROTH and TALBOT) 759
Diphosphoglycerate: Blood, acidified, decomposition, glycolysis relation (RAPOPORT and GUEST) 781
Dulcitol: 1,2,3,5,6-O-Pentamethyl, synthesis (TIPSON and LEVENE) 575

E

Endocrine(s): Ascorbic acid, avitaminosis influence (SURE, THEIS, and HARRELSON) 245
Enzyme(s): *See also* Anticatalase, Arginase, Catalase, Glyoxalase, Pepsin, Phosphatase, Trypsin
Erythrocyte: *See* Blood cell, red

F

Fat: Depot, linoleic acid relation (LONGENECKER) 13
—, oleic acid relation (LONGENECKER) 13
Fatty acid(s): Corn oil (LONGENECKER) 13
Deposition and utilization (LONGENECKER) 13
Fluorescein: Dichloro-, biological fluids, chlorides, determination, micro- (SAIFER and HUGHES) 273
Formalin: Fixation, liver lipids, effect (HALLIDAY) 65

G

Glucose-1-phosphate: Blood sugar formation, rôle (CORI, CORI, and SCHMIDT) 629
Liver glycogen synthesis, rôle (CORI, CORI, and SCHMIDT) 629

Glucuronic acid(s): Conjugated, biological formation, mechanism (LIPSCHITZ and BUEDING) 333

Glutathione: Oxidized, determination (DOHAN and WOODWARD) 393
—, reduction, electrolytic (DOHAN and WOODWARD) 393
Reduced, determination, glyoxalase use (SCHROEDER and WOODWARD) 283

Glycogen: Liver, synthesis, glucose-1-phosphate rôle (CORI, CORI, and SCHMIDT) 629

Glycolysis: Blood, diphosphoglycerate decomposition relation (RAPOPORT and GUEST) 781

Glyoxalase: Glutathione, reduced, determination, use (SCHROEDER and WOODWARD) 283

Growth: *dl*-Amino-N-monomethyltryptophane availability (GORDON) 309
l(+)-Amino-N-monomethyltryptophane availability (GORDON) 309
l(−)-Tryptophane availability (GORDON) 309

H

Hemoglobin: -Oxygen equilibrium (ALTSCHUL and HOGNESS) 315

Hexitol(s): O-Methylated, partially (TIPSON and LEVENE) 575

Homocysteine: *d*-, benzyl derivatives, optical inversion *in vivo* (DU VIGNEAUD, WOOD, and IRISH) 171

Hydrogen ion concentration: Blood cell, red, determination, spectrophotometric (DRABKIN and SINGER) 739

Hydrogen peroxide: Methionine determination, use (TOENNIES and CALLAN) 481

I

Iodine: Creatinuria, effect (GAEBLER and BARTLETT) 559
Metabolism, basal, effect (GAEBLER and BARTLETT) 559
Nitrogen excretion effect (GAEBLER and BARTLETT) 559

Iodoacetic acid: Carbohydrate metabolism, isolated tissues, effect (BARKER, SHORR, and MALAM) 33

Iron: Cytochrome oxidase, tissue, effect (SCHULTZE) 729

K

Ketosis: (MOREHOUSE) 769

Krogh: Syringe, blood serum specific gravity determination (SCHOUSBOE) 371

L

Lactic acid: Formation, muscle, working (FLOCK, INGLE, and BOLLMAN) 99

Lactone: Saccharo-, amine-precipitating reagent (KURTZ and WILSON) 693
Lecithin: Blood serum (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Body fluids and tissues, determination (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Tissue (THANNHAUSER, BENOTTI, WALCOTT, and REINSTEIN) 717
Light: Scattering, suspension of particles (DRABKIN and SINGER) 739
Linoleic acid: Fat depot relation (LONGENECKER) 13
Lipid(s): Animal (THANNHAUSER, BENOTTI, and REINSTEIN) 709
(THANNHAUSER, BENOTTI, WALCOTT, and REINSTEIN) 717
Blood, atmospheric pressure, low, exposure, effect (MACLACHLAN) 465
— plasma, petroleum ether extracts, nitrogenous contaminants (FOLCH and VAN SLYKE) 539
Cell nuclei (STONEBURG) 189
Liver, formalin fixation, effect (HALLIDAY) 65
Phytomonas tumefaciens (GEIGER and ANDERSON) 519
Tubercle bacillus, chemistry (ANDERSON and CREIGHTON) 57
Liver: Arginase, food effect (LIGHTBODY and KLEINMAN) 71
Liver—*continued:*
Glycogen synthesis, glucose-1-phosphate rôle (CORI, CORI, and SCHMIDT) 629
Lipids, formalin fixation, effect (HALLIDAY) 65
Lysophosphatide(s): (CHARGAFF and COHEN) 619

M

Magnesium: Distribution, magnesium sulfate administration, effect (SMITH, WINKLER, and SCHWARTZ) 51
Magnesium sulfate: Magnesium distribution, parenteral administration effect (SMITH, WINKLER, and SCHWARTZ) 51
Metabolism: Tissue, riboflavin and vitamin B heat-stable components, effect (HASTINGS, MUUS, and BESSEY) 295
—, thiamine effect (MUUS, WEISS, and HASTINGS) 303
—, vitamin deficiencies (HASTINGS, MUUS, and BESSEY) 295
(MUUS, WEISS, and HASTINGS) 303
Methionine: (TOENNIES and CALLAN) 481
Determination, hydrogen peroxide oxidation (TOENNIES and CALLAN) 481
Oxidative reactions (TOENNIES and CALLAN) 481
Skin, human (WILKERSON and TULANE) 477
Stratum corneum, human (WILKERSON and TULANE) 477

Mosaic: Tobacco virus protein, viscosimetry (FRAMPTON) 233
Muscle: Lactic acid formation, work effect (FLOCK, INGLE, and BOLLMAN) 99
Mycolic acid(s): Tubercle bacillus, avain, wax (ANDERSON and CREIGHTON) 57

N

Naphthalene-β-sulfonic acid: Amino acid reagent (BERGMANN and STEIN) 609
Nicotine: Urine, determination (CORCORAN, HELMER, and PAGE) 89
Nicotinic acid: Blood, mammals (PEARSON) 491
Nitrogen: Buckwheat leaf, metabolism (VICKERY, PUCHER, SCHOENHEIMER, and RITTENBERG) 791
Excretion, iodine effect (GAEBLER and BARTLETT) 559
—, pituitary, anterior, extract, effect (GAEBLER and BARTLETT) 559
Nucleus: Lipids (STONEBURG) 189

O

Oil: *See also* Corn oil
Oleic acid: Fat depot relation (LONGENECKER) 13
Organic compound(s): Vitamin C synthesis and excretion, feeding effect (LONGENECKER, MUSULIN, TULLY, and KING) 445
Oxidase: Cytochrome. *See* Cytochrome oxidase
Oxygen: Hemoglobin-, equilibrium (ALTSCHUL and HOGNESS) 315

P

Pancreatectomy: *d*-Xylulose metabolism, effect (LARSON, CHAMBERS, BLATHERWICK, EWING, and SAWYER) 701
l-Xylulose metabolism, effect (LARSON, CHAMBERS, BLATHERWICK, EWING, and SAWYER) 701
Pantothenic acid: Chick requirement (JUKES) 225
Pasteur reaction: (BARKER, SHORR, and MALAM) 33
Pentamethyl dulcitol: 1,2,3,5,6-O-, synthesis (TIPSON and LEVENE) 575
Pepsin: Crystalline, solubility (STEINHARDT) 135
—, —, factors affecting (STEINHARDT) 135
Peptide(s): Cystine, physical chemistry (GREENSTEIN, KLEMPERER, and WYMAN) 681
Phenylalanine: Chemistry (BLOCK and BOLLING) 1
Metabolism (BLOCK and BOLLING) 1
Nitration (BLOCK and BOLLING) 1
Phosphatase: Bone, sodium β-glycerophosphate hydrolysis, activation energy (BODANSKY) 197
Phosphate: Organic, determination, King method, urea and sodium chloride effect (RAE and EASTCOTT) 255

Phosphatide(s): Lyso- (CHARGAFF and COHEN) 619
Phytomonas tumefaciens, chemistry (GEIGER and ANDERSON) 519
Phospholipid(s): Blood, contaminants (CHRISTENSEN) 531
Fate, intravenous injection (HAVEN and BALE) 23
Phosphorus: Inorganic, bones, metabolism, radioactive phosphorus as indicator (MANLY and BALE) 125
—, teeth, metabolism, radioactive phosphorus as indicator (MANLY and BALE) 125
Radioactive, bone phosphorus, inorganic, metabolism, indicator (MANLY and BALE) 125
—, tooth phosphorus, inorganic, metabolism, indicator (MANLY and BALE) 125
Photometer: Photoelectric (ROSENFELD) 179
Phytomonas tumefaciens: Chemistry (GEIGER and ANDERSON) 519
Lipids (GEIGER and ANDERSON) 519
Phosphatide, chemistry (GEIGER and ANDERSON) 519
Pituitary extract: Anterior, creatinuria, effect (GAEBLER and BARTLETT) 559
—, metabolism, basal, effect (GAEBLER and BARTLETT) 559
—, nitrogen excretion, effect (GAEBLER and BARTLETT) 559
Pneumococcus: Soluble specific substance, chemo-immunology (GOEBEL, BEESON, and HOAGLAND) 455
Type XIV polysaccharide, capsular, blood Group A specific substance, relation (GOEBEL, BEESON, and HOAGLAND) 455
Polysaccharide: Pneumococcus Type XIV, blood Group A specific substance, relation (GOEBEL, BEESON, and HOAGLAND) 455
Protein(s): Blood serum, specific gravity relation (SCHOUSBOE) 371
Digestibility *in vitro* (JONES and GERSDORFF) 207
Tobacco mosaic virus, viscosimetry (FRAMPTON) 233
Proteolysis: Cosubstrates (BEHRENS and BERGMANN) 587

R

Riboflavin: Tissue metabolism, effect (HASTINGS, MUUS, and BESSEY) 295
Ring spot: Tobacco, virus, recovered plants, isolation (STANLEY) 429
Virus, tobacco, isolation and properties (STANLEY) 405

S

Saccharolactone: Amine-precipitating reagent (KURTZ and WILSON) 693
Selenium: Cevine dehydrogenation (CRAIG and JACOBS) 79

Skin: Human, chemistry (WILKERSON and TULANE) 477
—, methionine (WILKERSON and TULANE) 477
Sodium: Blood cell, red (STREEF) 661
Sodium chloride: Organic phosphate determination, King method, effect (RAE and EASTCOTT) 255
Sodium β-glycerophosphate: Hydrolysis, bone phosphatase, activation energy (BODANSKY) 197
Specific gravity: Blood serum, protein relation (SCHOUSBOE) 371
Spectrophotometry: (DRABKIN and SINGER) 739
Sphingomyelin: Blood serum (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Body fluids and tissues, determination (THANNHAUSER, BENOTTI, and REINSTEIN) 709
Tissue (THANNHAUSER, BENOTTI, WALCOTT, and REINSTEIN) 717
Stratum corneum: Human, methionine (WILKERSON and TULANE) 477
Substrate(s): Co-, proteolysis (BEHRENS and BERGMANN) 587
Sulfonic acid: Naphthalene-β-, amino acid reagent (BERGMANN and STEIN) 609

T

Thiamine: Determination, ultramicro-, fermentation method (ATKIN, SCHULTZ, and FREY) 471
Tissue metabolism, effect (MUUS, WEISS, and HASTINGS) 303
Threonine: Allo-, threonine, conversion (CARTER, HANDLER, and MELVILLE) 359
Allothreonine conversion (CARTER, HANDLER, and MELVILLE) 359
Tissue: Metabolism, riboflavin and vitamin B heat-stable components, effect (HASTINGS, MUUS, and BESSEY) 295
—, thiamine effect (MUUS, WEISS, and HASTINGS) 303
—, vitamin deficiencies (HASTINGS, MUUS, and BESSEY) 295
(MUUS, WEISS, and HASTINGS) 303
Tobacco: Mosaic virus protein, viscosimetry (FRAMPTON) 233
Ring spot virus, isolation and properties (STANLEY) 405
— — —, recovered plants, isolation (STANLEY) 429
Tooth: Phosphorus, inorganic, metabolism, radioactive phosphorus as indicator (MANLY and BALE) 125
Trypsin: Casein digestion, cystine liberation (JONES and GERSDORFF) 207
Tryptophane: *dl*-Amino-N-monomethyl-, growth availability (GORDON) 309

Tryptophane—*continued:*
l(+)-Amino-N-monomethyl-, growth availability (Gordon) 309
l(−)-, growth availability (Gordon) 309
Tubercle bacillus: Avian, wax, mycolic acids (Anderson and Creighton) 57
Lipids, chemistry (Anderson and Creighton) 57

U

Urea: Blood, determination (Howell) 641
Organic phosphate determination, King method, effect (Rae and Eastcott) 255
Urine: Nicotine determination (Corcoran, Helmer, and Page) 89

V

Veratrine: Alkaloids (Craig and Jacobs) 79
Virus: Tobacco mosaic protein, viscosimetry (Frampton) 233
— ring spot, isolation and properties (Stanley) 405
— — —, recovered plants, isolation (Stanley) 429
Vitamin(s): B, heat-stable components, tissue metabolism, effect (Hastings, Muus, and Bessey) 295
C excretion (Musulin, Tully, Longenecker, and King) 437
Vitamin(s)—*continued:*
C excretion, organic compound relation (Longenecker, Musulin, Tully, and King) 445
— synthesis (Musulin, Tully, Longenecker, and King) 437
— —, organic compound relation (Longenecker, Musulin, Tully, and King) 445
Deficiency, tissue metabolism (Hastings, Muus, and Bessey) 295
(Muus, Weiss, and Hastings) 303
Interrelationships (Sure, Theis, and Harrelson) 245
K, physicochemical concentration (Riegel, Schweitzer, and Smith) 495
See also Avitaminosis

W

Wax: Tubercle bacillus, avian, mycolic acids (Anderson and Creighton) 57
Work: Muscle lactic acid formation, effect (Flock, Ingle, and Bollman) 99

X

Xylulose: *d*-, metabolism, pancreatectomy effect (Larson, Chambers, Blatherwick, Ewing, and Sawyer) 701
l-, metabolism, pancreatectomy effect (Larson, Chambers, Blatherwick, Ewing, and Sawyer) 701
